

Broadband Deployment Services from Start to Finish

It doesn't matter where you are in your broadband journey. ZCorum is available to help at any stage of the process.

Reliable Broadband Services for your Community

Quality internet access means the difference between a community that copes well and one that's in crisis during unforeseen events. With virtual healthcare for the homebound, online only classrooms and work from home business, having fast, reliable internet is not just expected, but a necessity. Communities must take steps to provide high-speed technology so their communities can thrive and survive or else watch their populations fall behind the rest of the world.

Meeting the Needs of Current and Future Generations

- **Better Communication** - Building a network contributes to community development and enhances community participation. The community network also addresses problems of social exclusion and other forms of community breakdown. Modern technology enables new communications capabilities for collaboration and other business communications. Cities can deliver information efficiently and continuously provide updated information to citizens.

- **Participation** - Technology improves the gap between residents, businesses and Government, ensuring they are connected in meaningful ways. Citizens participate in real-time forums and elected officials, school personnel and government services. Live streaming provides a continuous stream of information for public notices, services for the elderly and school information.

- **Savings** - Business and Government processes are streamlined, improving efficiency and resulting in savings. Savings are then reinvested into further development of services. Paying taxes online, registering vehicles, procuring hunting, fishing, and pet licenses all completed with the click of a button. Paying utility bills, downloading homework assignments, telehealth calls are all available and save citizens time and money.

- **Entrepreneurship** - After decades of decline, rural areas with new high-speed internet are now attracting new residents due to the combination of fast access and the amenities it brings. With this rural rebound, there's an emergence of rural based service firms and entrepreneurs, who rely on telecommunications to trade with a broad market. The ability of these firms to fit into the digital economy proves crucial for building a local community's economic base.

- **Let Us Help** you secure the future growth and prosperity of your community. At ZCorum, we treat your investment as if it were our own. Whether developing business plans, designing your network or managing your construction project, we create a framework to build your fiber network in the most economical and efficient way to serve your community and benefit its future. After the build, we manage your network security and ongoing updates and provide support for your residential and business subscribers.

Our Services

Broadband Feasibility

We conduct a wide-ranging feasibility study specifically designed to meet the unique needs of your community. We identify the opportunities for enhanced fiber broadband services delivered to your residents, and determine the technology best suited to support it. We then use our findings to determine if the proposed services are feasible from both a technical and economic standpoint. If the project looks feasible, the information derived from the analysis is used to develop a detailed business and engineering plan of action.

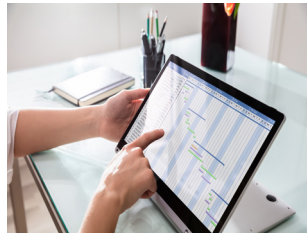

Design & Engineering

We understand what it takes to design and engineer a broadband solution that will meet your unique needs and be implemented in a timely and cost-effective manner. When you partner with us, you'll experience an approach to network design and deployment that is as unique as your community. We are backed by years of experience serving large cities to small townships, co-ops and municipalities, and have the ability to service our clients over the life of the deployed network.

Project Management

Our team provides you with real-world solutions for deploying broadband throughout your area. We work with you to develop a strategic plan and identify the best solution for your network based on your requirements. We take into account your current infrastructure, available right of ways, your budget, your goals and community needs. From there, we develop a detailed project management plan that addresses all of the necessary steps to complete the project in a timely and cost-effective manner.

Construction

We have the resources available for any size project, and handle all local, state, and federal ordinances and contract requirements. When the project is completed, our state-of-the-art equipment ensures that your network performs at optimum specifications and meets all FCC regulations. In short, we are committed to serving you and your community with our expertise, experience, quality workmanship and safe construction practices, while meeting your contract agreements and deadlines.

Operational Services

We provide the local resources needed to manage your broadband services, from installing drops and equipment for new subscribers, to maintaining your network and dispatching service technicians if there is a problem. Our operational teams are accountable to you, and will serve your community with passion and professionalism. We only employ those who will take pride in providing the quality service experience that you and your citizens deserve.

Managed Services & End User Support

When your broadband network is ready, our managed services and End User Support are here to help you operate more efficiently and economically. We provide residential and commercial VoIP, IPTV, hosted email, device provisioning, network monitoring, engineering assistance, in addition to call center service and support. Most importantly, we treat you and your subscribers the way we would like to be treated.

Why Choose Us?

For nearly three decades ZCorum has offered private-label Internet services and pioneering products to internet service providers in the United States and around the world. From the early days of dial-up to today's multi-gigabit fiber, our experience and services have empowered hundreds of successful service providers.

Our customers include fiber and cable operators, municipalities, public utilities and co-ops, telephone companies, wireless internet service providers, hotels and military institutions. Internet service providers rely on us to keep their broadband running effortlessly and their subscribers online.

Whether you are thinking about deploying broadband for the very first time, or are expanding into a new service area, we've got your project covered from start to finish with our suite of managed broadband services.
