

Broadband.Money and ZCorum

*The fastest way to discover
and win broadband grants.*

Get your money. Track your progress. Automate your reporting.

Take advantage of the fastest and most efficient way to build grant applications with Broadband.Money and ZCorum. From researching underserved areas, and collaborating with partners to submitting your proposals, we provide everything you need to create outstanding applications, including the complete package for BEAD. All in one convenient place.

Say goodbye to the complexities of traditional grant applications. Embrace a time-saving approach that guides you from application submission to initial award, final disbursement, and ongoing reporting and testing requirements. We ensure you're fully prepared for success.

Features

Grant Discovery: The fastest way to discover and apply for broadband grants in your territory, saving you time and effort in the application process. Apply to many state and federal programs at once from a simple, intuitive interface.

Territory Analysis: Pinpoint unserved and underserved areas in your territory, backed by valuable competition and performance data to make informed decisions.

Comprehensive Tools: Broadband.Money offers a suite of tools designed for every step of your broadband grant journey, eliminating the need for hiring an extensive team.

Line Up Matching Funds: You will need proof of matching funds for at least 25% of the grant value for BEAD applications. Up front. Match with Letter of Credit and equity providers. Quickly find prospective capital partners. Get offers for equity, debt, and forward receivables to meet your goals.

World-Class Partners: Optionally seek assistance from reputable partners like Nokia and BCG, enhancing your application's credibility and effectiveness.

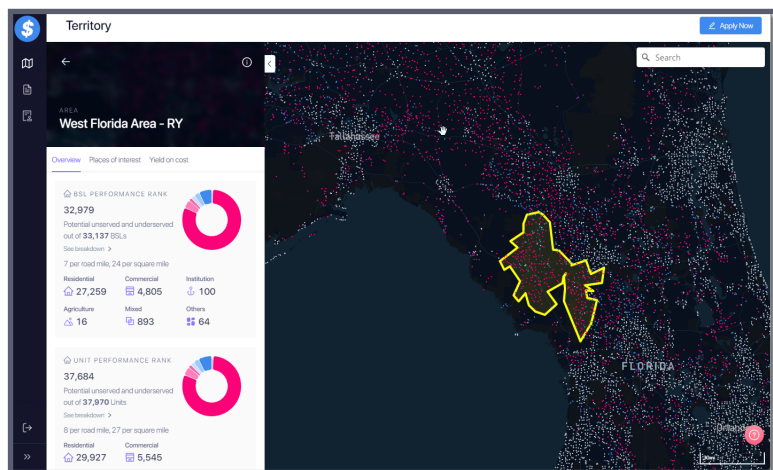

Five Easy Steps to Complete Grant Submissions

Research:

- Gain new insights into your potential territory with hundreds of data layers
- See income and education levels, minority areas, speed tests, units in MDUs and more
- Identify location of every provider's footprint

Build:

- Built in library of cities, counties, tribal or coop footprint to select and place on the map
- Breakdown of all broadband serviceable locations and how many are unserved and underserved
- Bring all demographic data down to the rooftop level into a single pane of glass for BEAD

Calculate Cost:

- Input your own parameters and estimate costs to build the network based off road miles and demand
- See your predicted net income based on residential, commercial, agricultural, or anchor institutions

Submit:

- Your data is pulled into the application. Add your own towers and fiber lines as needed
- Fill-in-the-blanks application is automatically submitted to the states

Track:

- Manage and submit one or more proposals in one or multiple states
- Track progress and manage update requests from a single centralized location
