A New IPTV Solution Designed for You and Your Subscribers

ZCorum presents a revolutionary video delivery solution with SFN TV that reduces the cost and hassle of providing Pay TV service to your subscribers.

Lower Start-up and Equipment Costs

SFN TV is much less costly than setting up or managing your own headend. There are no dishes and no racks of equipment needed. Your end user will find the service simple to use. While it operates on popular set top boxes and other devices, the SFN TV NOW app also runs on Windows and on Android and Apple devices so your subscribers can watch TV anywhere in their home. DVR is included with the TV service at no additional fee.

Lower Ongoing Operating Costs

With the streamlined SFN TV headend there is no need for a large, costly headend, significantly reducing the usual ongoing operational and maintenance costs associated with providing Pay TV services. Plus, you eliminate the hassle of obtaining your own programming, and the stress of negotiating programming contracts and annual renewals. Billing subscribers is also easy with built-in SFN TV API integration. And if you're offering QAM-based video now, migrating to IPTV allows you to reclaim valuable spectrum that can be used for broadband service.

Put Your Customer in Control of Their TV Experience

SFN TV provides a lower cost, all-in-one package alternative to traditional cable TV that puts your subscriber first. Your customers will have a wide array of choices for their TV experience from one service, including popular national channels and local content, without having to pay for and juggle multiple TV applications. With Restart TV, customers can start any live program on the guide from the beginning. And Catch-up TV lets customers go back up to 24 hours and watch or record any program on the guide.

Let Us Handle Your Support Needs

We can even provide 24x7x365 technical support for your subscribers via phone, chat or email from company-owned, US-based call centers. Support specialists will walk your subscribers through the IPTV features on their favorite streaming device or app, and will also troubleshoot the service should there be any technical issues. Want us to go deeper? We can also troubleshoot the subscriber's internet connection and their home networking, ensuring one, smooth IPTV support experience.
