

# Save Money with TruVizion Diagnostics for GPON Networks

*Fiber deployments are a large investment in the future - PROTECT YOUR INVESTMENT*

## Simple, Easier FTTH Troubleshooting Management and Performance Metrics for Data Video and Voice

### Recover from Outages Faster

TruVizion provides pivotal, decisive information to technicians about the severity of a problem as it happens. The user-friendly dashboard includes a map of all subscriber ONTs, color coded on the screen to indicate status and alert level.

### Diagnostics Breakdown Screen

A summary page of all devices shows ONT status by OLT, shelf, card and port. Users can drill-in to a detailed diagnostics page for each subscriber to see the status of the PON connection, gigabit Ethernet ports, T1/E1 ports, as well as voice and video ports.

### Enhanced Search Features

Quick search and advanced search options are available in TruVizion. Search for customers by Name, Phone Number, Street Address, Email Address, MAC Address, IP Address, or the ONT Serial Number or Identifier.

### Recover from Outages Faster

TruVizion's patented technology offers full-featured GPON ONT diagnostics that are easier and more intuitive to use than other management systems. It provides a powerful tool that will increase the efficiency of your Network and Customer Care teams. Manage your FTTH GPON network with the flexibility and cost advantages you need to deliver fiber to your subscribers without breaking the bank. TruVizion for GPON is currently available for providers on compatible platforms and consolidates key metrics that providers need to keep watch on their fiber network.

And, if you also support a DSL or cable modem network, TruVizion's cross-platform support and single user interface provide even greater boosts to operational efficiency.

### Who are We?

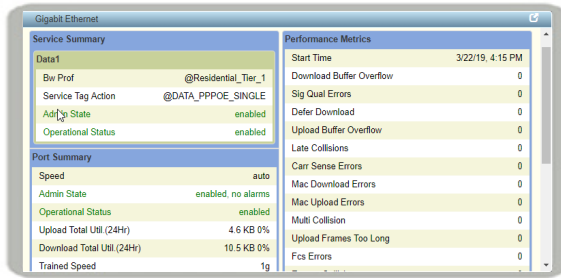

We help service providers reduce operational costs, increase staff efficiency and improve the quality of experience for the subscriber.
